

AAL01

Alemlube Automotive Wheel Balancer Wheel Lift

January 2026

The Alemlube Automotive AAL01 Wheel Balancer Wheel Lift is a technologically advanced, robustly constructed machine that is pneumatically driven.

Rated to lift tyres of weights up to 75kg, the AAL01 wheel lift, minimises the strain on technicians when mounting heavy wheels onto a wheel balancer.

Complete with a filter/lubricator, the unit has a wide tyre support panel to handle those wider, more difficult tyres & has a user-friendly low access point of only 110mm with a low gradient for easy rolling of tyres onto the loading base.

The AAL01 essentially eliminates the need to lift & locate wheels onto the balancing shaft of most wheel balancers & is suitable for automotive workshops, tyre services & car dealerships. Make safety & ease a priority & make Worksafe issues a thing of the past at your workshop with the AAL01.

SPECIFICATIONS, FEATURES & BENEFITS

- Designed for use with most wheel balancers in use today
- 75kg maximum wheel weight/lifting capacity
- Increases efficiency & safety in the workshop
- Steel & aluminium composite construction
- Pneumatically driven
- Working air pressure 116-145psi
- Maximum lift height: 486mm
- Minimum lift level: 110mm
- Sliding tray to easily move wheel up to the balancing machine
- Ideal for light vehicles & heavy 4WD wheels
- Powder coated finish
- Dimensions: 800mm x 510mm x 870mm (Maximum height 1,210mm)
- Weight: 50kg
